

The AlphaCentric Robotics and Automation Fund invests primarily in companies that design and build robotics and automation systems worldwide.

Why Invest?

- As an actively managed portfolio, we believe the Fund is a pure-play strategy that offers high growth potential underrepresented in the S&P 500
- The drivers of growth in this space (aging demographics, competitive pressures, productivity enhancement) have been accelerated by Covid-19
- Portfolio Manager was an early investor in robotics and automation and has developed domain expertise within this rapidly growing industry
- Fund may provide differentiated exposure by investing broadly across robotics and automation

Fund Performance as of 6/30/21 (Annualized if greater than 1 year)

Inception Date: 5/31/17	QTD	6 MOS	YTD	1 YR	3 YR	Inception
GNXIX	4.64	6.06	6.06	40.75	15.68	16.98

You can also obtain a prospectus at www.AlphaCentricFunds.com.

Growth of \$10,000

MSCI ACWI TR Index: The MSCI ACWI Index, MSCI's flagship global equity index, is designed to represent performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 26 emerging markets. You cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

S&P 500 TR Index: The S&P 500 is a stock market index that measures the stock performance of 500 large companies listed on stock exchanges in the U.S.

Alternative investments may not be suitable for all investors and an investment in the Fund is suitable only for investors who can bear the risks associated with the Fund's shares and should be viewed as a long-term investment.

Fund Objective

The Fund's objective is long-term growth of capital.

Investment Strategy

- The Fund seeks to achieve its objective by investing in US and foreign companies creating innovative technologies across multiple sectors
- Invests primarily in developed markets but may also invest in emerging markets, targeting companies with a market capitalization over \$50 million
- Portfolio consists of companies developing breakthrough technologies in areas such as:
 - Robotic-assisted surgery
 - Aerospace & defense
 - Transportation
 - Manufacturing

How to Invest

companies and normally have a lower trading volume than larger companies. Rapid change to technologies that affect a company's products could have a material adverse effect on operating results. Robotics and automation companies may rely on a combination of patents, copyrights, trademarks and trade secret laws to establish and protect proprietary rights in their products and technologies. The Fund is non-diversified and as a result, changes in the value of a single security may have a significant effect on the Fund's value. The Fund is subject to regulatory change and tax risks; changes to current rules could increase costs associated with an investment in the Fund. Investments in international markets present special risks including currency fluctuation, the potential for diplomatic and political instability, regulatory and liquidity risks, foreign taxations and differences in auditing and other financial standards. Emerging market securities tend to be more volatile and less liquid than securities traded in developed countries.

Investment Process

- ➔ Management has constructed what they believe is a 'pure-play' portfolio by conducting fundamental bottom-up research on a universe of over 200 stocks.
- ➔ Companies must derive a significant amount of their revenues from the sale of robotics and automation systems and maintenance. The manager also seeks smaller market cap companies who maintain a high spending rate on research and development.
- ➔ Risk is managed via portfolio construction guidelines, cash levels and the use of structural hedges.
- ➔ Allocations are made worldwide in an effort to provide greater diversification

Country Allocation as of 6/30/21

Portfolio Characteristics as of 6/30/21

Important Risk Information

Investing in the Fund carries certain risks. The Fund may invest a percentage of its assets in derivatives, such as futures and options contracts. The use of such derivatives and the resulting high portfolio turnover may expose the Fund to additional risks that it would not be subject to if it invested directly in the securities and commodities underlying those derivatives. The Fund may experience losses that exceed those experienced by funds that do not use futures contracts and option strategies. Securities of robotics and automation companies, especially smaller, start-up companies tend to be more volatile securities than securities of companies that do not rely heavily on technology. Smaller sized companies may experience higher failure rates than larger
